MANAGED CLOUD SERVER

Reliable & Secure Managed Cloud Servers
For Your Business Needs

W W W . A Z Y M . C O M

WHAT ARE MANAGED CLOUD SERVERS?

Azym Managed Cloud Servers are KVM Virtual Machines (KVM) that are served by a computing resource pool consisting of network switches, enterprise class data storage systems, high end physical computer servers, and KVM virtualization and cloud computing software.

Each of our Managed Cloud Servers has its own dedicated operating system and maintains the same functionality as traditional physical computers.

Our Managed Cloud Servers support High Availability (HA). If a physical computer fails, your cloud server will be automatically switched to other live physical computers.

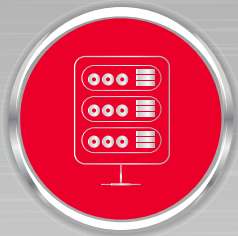

We guarantee 99.9% Managed Cloud Server uptime!

Cloud hosting provides the scalability of hardware resources from CPU and Memory to Disk storage. Managed Cloud Servers gives you the same flexibility as owning your own hardware, without the need for technical teams to manage your own IT infrastructure. Deploying new servers can happen in a matter of minutes or hours, instead of taking days to set up as is the case with managing your own server hardware. All of this is taken care of by our own system administrators.

Azym Managed Cloud Servers are ideal solutions for ERP, Web Hosting, Email Server Hosting, Application Hosting, Software as a Service (SaaS), eBusiness and IT Operation Hosting, Private Cloud, and Off-site Disaster Recovery services.

FEATURES

HIGH AVAILABILITY

In-built redundancy means that there is no single point of failure in our system. We aim to ensure a high level of operational performance by using high quality infrastructure for the true cloud experience.

24/7 SUPPORT

We provide 24/7 ticket email support and 24/7 live sales and support chat directly from the Azym Technologies operation center. Our goal is to provide fast technical support for all customer requests. Our average response time is about 18 minutes.

AUTOMATIC BACKUP

Every Managed Cloud Server suite includes fully automatic daily data backups. The backup will be made every day, and the backup data will be stored in safety.

HIGH PERFORMANCE

With Azym Managed Cloud Servers, your business applications are not longer limited to the resources of a single shared server. You now have access to a pool of resources made available by multiple clustered servers. This allows for increased processing power, availability and reliability to handle any load size or demands that your applications may encounter.

OPERATING SYSTEMS

We offer the following operating systems for your Managed Cloud Server. Please note that Windows Server is only available on certain packages, while the Linux distro's are available on all of our products. Speak to us if you require any specific OS not listed here.

Operating System Supported

- | | |
|---|--|
|  Windows Server 2016 |  Red Hat EL |
|  Windows Server 2019 |  Cloudlinux |
|  ClearOS Linux |  FreeBSD |
|  CentOS Linux |  Ubuntu Linux |
|  OpenSUSE Linux |  Debian Linux |
|  Fedora Linux |  and more... |

CONTROL PANEL

Using our user friendly, easy and reliable control panel, you can control every aspect of your cloud. Including IP Address Management, Suspend, Unsuspend, Powering Off, Powering On, Hard Rebooting, Soft Rebooting, Disk Space Status, Billing Management, Support Tickets.

CLOUD TECHNOLOGY

Our Managed Cloud Servers are hosted in world-class industry leading datacenters. All Managed Cloud Servers are hosted on our own cloud infrastructure assuring high availability and reliability.

SECURITY

- Managed Firewalls
- Detailed and Enforced Change Management Protocols
- Managed DoD/DDoS Mitigation
- Physical Data Center Security and Monitoring
- Secure Hardened Network Design
- SSAE 16 (formerly SAS 70) Certified Data Center
- Multi-level Intrusion Prevention
- Redundant Diesel Power Generators
- Pre-action Fire Suppression Systems
- Power UPS and Environmental Cooling Systems
- And much more...

PRICING

Managed Cloud Server BASIC

RAM: 4GB

Processor: 1 vCPU

Storage: 50 GB

OS: Linux Flavor

Bandwidth: 500 GB (Monthly)

Public IP: 1 (IP V4)

Backup: Daily Full Backup

QAR 2,500/monthly

Managed Cloud Server BASIC⁺

RAM: 6 GB

Processor: 2 vCPU

Storage: 100 GB

OS: Linux Flavor

Bandwidth: 1 TB (Monthly)

Public IP: 1 (IP V4)

Backup: Daily Full Backup

QAR 3,500/monthly

Managed Cloud Server **STANDARD**

RAM: 8 GB

Processor: 4 vCPU

Storage: 150 GB

OS: Linux Flavor

Bandwidth: 2 TB (Monthly)

Public IP: 1 (IP V4)

Backup: Daily Full Backup

QAR 5,500/monthly

Managed Cloud Server **STANDARD⁺**

RAM: 8 GB

Processor: 8 vCPU

Storage: 200 GB

OS: Linux Flavor

Bandwidth: 4 TB (Monthly)

Public IP: 1 (IP V4)

Backup: Daily Full Backup

QAR 8,500/monthly

Managed Cloud Server **ADVANCE**

RAM: 16 GB

Processor: 8 vCPU

Storage: 500 GB

OS: Windows Server or
Linux Flavor

Bandwidth: 4 TB (Monthly)

Public IP: 1 (IP V4)

Backup: Daily Full Backup

QAR 13,000/monthly

Managed Cloud Server **ADVANCE⁺**

RAM: 24 GB

Processor: 12 vCPU

Storage: 1 TB

OS: Windows Server or
Linux Flavor

Bandwidth: 4 TB (Monthly)

Public IP: 1 (IP V4)

Backup: Daily Full Backup

QAR 20,000/monthly

Managed Cloud Server ENTERPRISE

RAM: 32 GB

Processor: 16 vCPU

Storage: 2 TB

OS: Windows Server or
Linux Flavor

Bandwidth: 6 TB (Monthly)

Public IP: 2 (IP V4)

Backup: Daily Full Backup

QAR 30,000/monthly

Managed Cloud Server ENTERPRISE⁺

RAM: 64 GB

Processor: 32 vCPU

Storage: 4 TB

OS: Windows Server or
Linux Flavor

Bandwidth: 8 TB (Monthly)

Public IP: 5 (IP V4)

Backup: Daily Full Backup

QAR 50,000/monthly
